The Nile University of Nigeria (NUN) Community

Established in 2009, Nile University of Nigeria (NUN) is a multidisciplinary university located in Abuja, Nigeria. The University is committed to developing future generations of professionals and leaders who can thrive and make a positive impact in society. With eight academic units, comprising the College of Health Sciences and the Faculties of Arts & Social Sciences, Computing Studies, Engineering, Environmental Sciences, Law, Management Sciences and Science, as well as a School of Postgraduate Studies, the University offers more than 50 undergraduate programmes and more than 50 postgraduate programmes. As a member of Honoris United Universities, Africa's first and largest pan-African private higher education network, Nile University is also part of a wider community of institutions committed to preparing students and professionals for an evolving world of work.

Building on its core academic offering, the University has expanded its educational ecosystem to support learning and professional development at different stages of an individual's career. This extends from undergraduate and postgraduate education to executive education, professional development, flexible learning and industry engagement.

Through Nile Business School, the University provides executive and professional education for business leaders, entrepreneurs and professionals seeking to strengthen their strategic thinking, management and leadership capabilities. Its offerings include Professional Development Courses, Executive Development Programmes, the Online Master of Business Administration and the Executive Master of Business Administration. This focus on enabling professionals to continue developing throughout their careers extends naturally to Nile Online, which provides flexible degree programmes, executive programmes and professional learning opportunities designed to help learners acquire relevant skills and advance their careers without putting their professional lives on hold.

Beyond supporting individual learners, the University's wider ecosystem also extends to organisations through Nile Consult & Services Limited, which provides consultancy, training and specialised solutions tailored to the needs of different industries. Together, these interconnected offerings enable Nile University of Nigeria to support students, professionals and organisations through education, skills development and professional learning, while contributing to the development of the capabilities required for an evolving world of work.

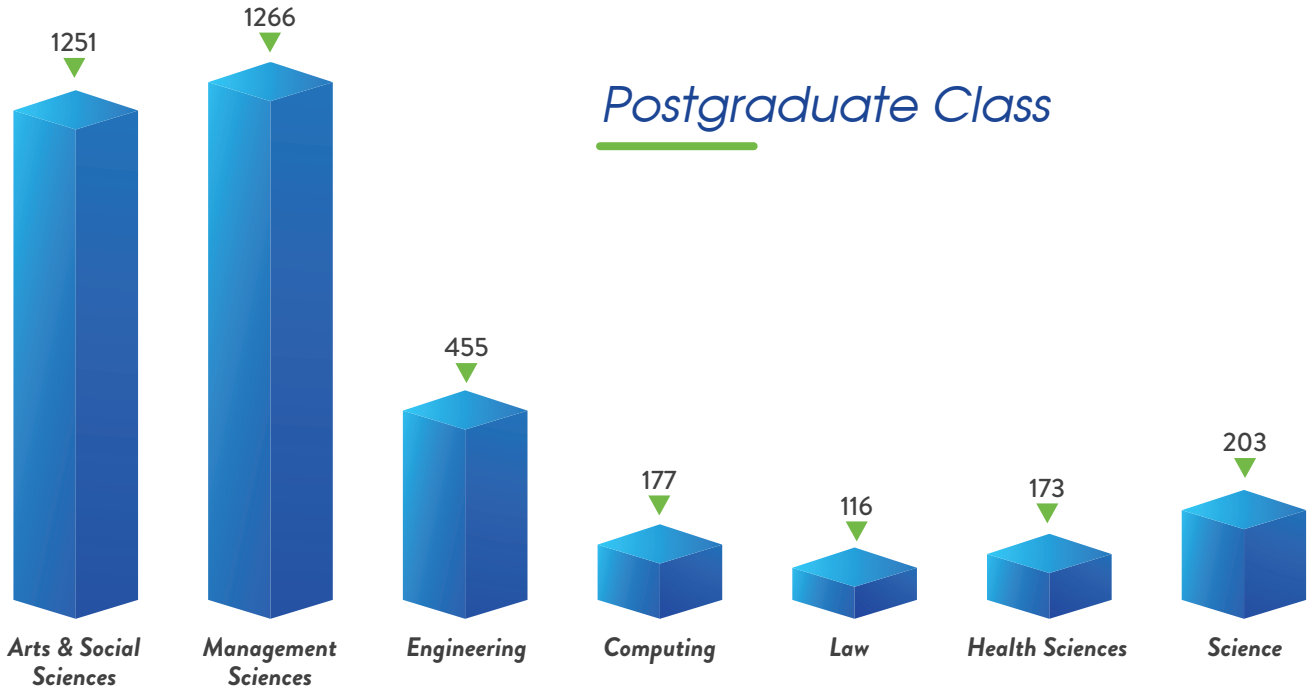

Building Employability Into the Student Journey

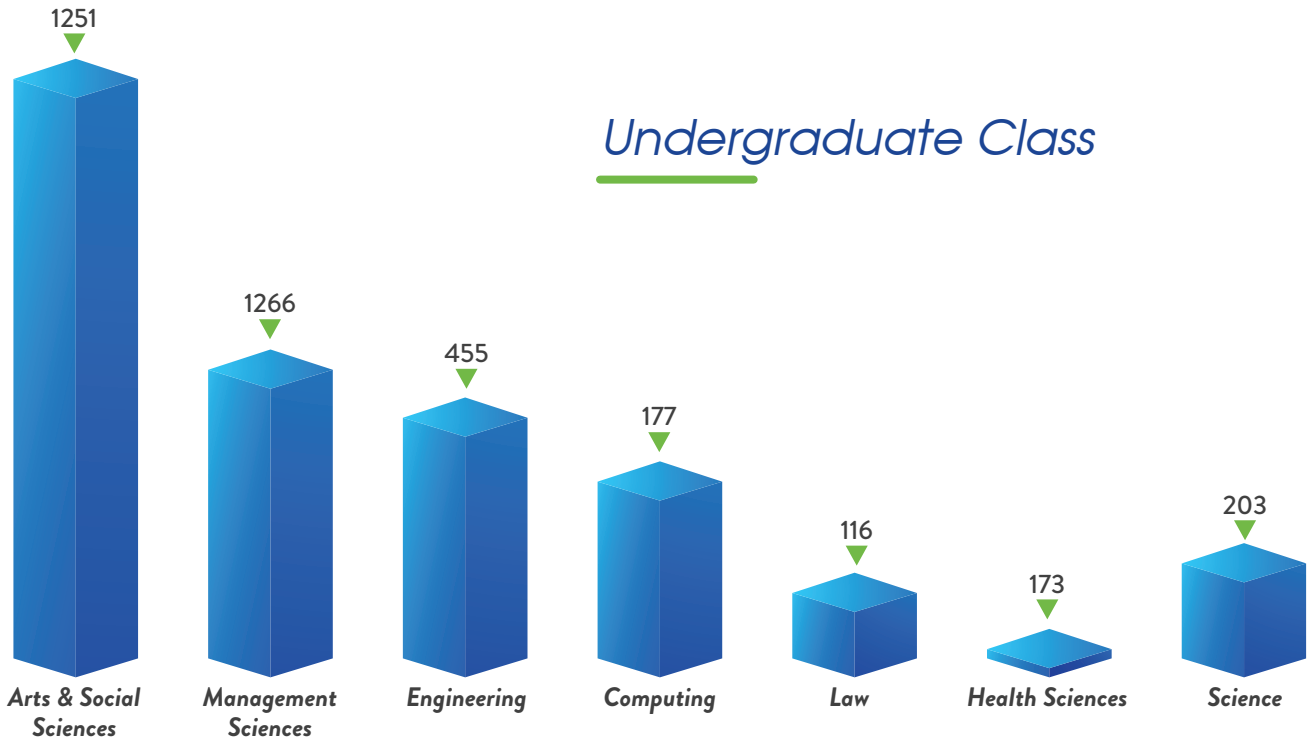

At Nile University, employability is not treated as an outcome that begins at graduation. It is built into the student journey through career development, industry exposure, work experience, entrepreneurship and skills development.

The 2025 Employability Report examines how this approach translated into measurable outcomes for the Class of 2024, from employment and earnings to career preparation, industry engagement and entrepreneurial activity.

The Class of 2024

The Class of 2024 comprised 3,803 undergraduate (UG) and 3,641 postgraduate (PG) graduates, bringing the combined graduating cohort to 7,444. This represents a significant milestone in the University's continued growth and commitment to developing talent across disciplines.

Measuring Employability

Nile University recorded an overall employment rate of 91%, a 4 percentage-point increase from the previous year .

Our graduates are currently working across leading organisations, including BCG, SCIDaR, Sydani, Providus Bank, and the World Trade Centre, and the Central Bank of Nigeria (CBN).

Graduate earnings also improved, with the average annual salary for PG graduates increasing to N6.4 million, a 20% increase compared with the previous year. The PG payback period reduced to 0.5 years, meaning graduates are recovering the cost of their education more quickly. At the same time, PG ROI increased to 200%, a 120 percentage-point improvement from the previous year. These figures point to a stronger financial return from a Nile University of Nigeria education, particularly for postgraduate students.

The University's Value for Money score increased to 86%, indicating that students continue to see value in their investment at Nile.

Institutional Employability Strategy

At Nile University of Nigeria, the "Employability by Design" philosophy is fundamentally about producing graduates who are not just academically competent, but are innovators, problem-solvers, and future-ready professionals. The institution's approach is captured in its commitment to "building innovators, entrepreneurs, and job seekers," aiming to prepare its graduates to build businesses, shape industries, and tackle national and international challenges. This vision is reinforced by the university's integration into Honoris United Universities, the first and largest pan-African private higher education network. This membership provides a robust, data-driven employability framework that ensures curricula are aligned with continental market trends and future skills needs. The goal is to develop employable graduates who possess an entrepreneurial mindset and skills required to thrive in a rapidly changing world of work.

Career Development Learning and Skills Integration

Nile University strategically integrates career development learning throughout the student journey, ensuring skills are built progressively.

i. **Foundational Learning:** For first-year students, the Career Exploration Programme serves as a structured initiative to build early awareness of career pathways, encourage self-discovery, and foster professional preparedness from the start of their academic journey. As the first stage of a comprehensive four-phase career development plan, it focuses on helping students identify their interests and strengths, explore various career options, develop essential career readiness skills, and begin making informed academic and career decisions as they progress through subsequent stages of exploration, skill-building, and transition into the workforce. This is complemented by a digital strategy where students are directed to recommended modules on the university's Learning Management System (LMS) to build essential soft skills at their own pace.

ii. **Experiential Learning:** To bridge the gap between theory and practice, the university facilitates access to virtual micro-internships. Through its network, students can gain crucial international work experience via fully online placements in companies across the world.

iii. **Pre-Graduation Preparation:** For graduating students, the Career Services Centre organises targeted job readiness webinars covering critical topics. These include job search strategies, CV reviews, the expectations and realities of remote work, and work ethics and professionalism. These sessions are designed to prepare the graduating class on current industry trends and in-demand skills. Recognising that different industries have unique demands, the Career Services Centre hosts faculty-based career development symposiums tailored to each faculty. These events are supplemented with intensive practical sessions such as mock interviews and assessment centre exercises, to help students practise and refine their skills.

iv. **Work Experience and Industrial Training:** Work-integrated learning is a cornerstone of the Employability by Design approach, giving students opportunities to gain practical experience before graduation. Beyond coordinating placements through the Students' Industrial Work Experience Scheme (SIWES), the Career Services Centre responded to more than 90 employer talent requests, facilitating internship opportunities for 1,099 students. These industry connections provide students with practical experience and early exposure to the workplace.

v. **Honoris Sustainability, Work Ethics and Gender Equity:** The Honoris Sustainability, Work Ethics and Gender Equity Course is a mandatory online programme delivered through the Honoris Online Academy LMS and required for final-year clearance. The course builds awareness of the United Nations Sustainable Development Goals while strengthening ethical conduct, professionalism, gender equity and inclusive leadership.. It also enhances critical thinking, collaboration, and problem-solving skills, preparing students for employer expectations and the evolving future of work. The programme aligns with key SDGs, including Quality Education, Gender Equality, Decent Work and Economic Growth, Responsible Consumption and Production, and Peace, Justice, and Strong Institutions.

The course has had a strong impact on final-year students by complementing their academic knowledge with global, cross-cutting competencies and supporting their transition into professional environments. It has improved awareness of ethical responsibilities across disciplines such as engineering, law, and the built environment, while encouraging the application of sustainability principles to final-year projects and real-world challenges. In addition, students have developed a deeper understanding of sustainability within their fields, increased awareness of ethical leadership and gender inclusion, and greater motivation to engage in sustainable development initiatives beyond the classroom.

Institutional Strategy, Partnerships, and Infrastructure

The employability strategy is supported by a robust institutional framework, significant partnerships, and a dedicated support infrastructure.

i. **Industry Partnerships:** A central pillar of the strategy is building deep relationships with key industry players. The university has successfully collaborated with renowned companies like BCG, Providus Bank, and SCIDaR to give students access to world-class career development expertise. This is part of a broader network of over 130 employer-partners from various industries, including Huawei, Coca-Cola, McKinsey, World Trade Centre, Nestlé, MTN and GIZ, who actively engage with the university at events like the annual Career Fair.

ii. **Technology-Enabled Scaling:** To extend its reach and impact, the Career Services Centre leverages AI-assisted tools, through its collaboration with the Wadhwani Foundation, which provides access to the AI tool Interview Coach. These tools allow the Career Services Centre to scale its operations, providing foundational career support and resources to the entire student body efficiently.

iii. **Structured Career Journey:** The students career development is guided by a comprehensive four-phase career plan. This phased approach ensures that from entry to exit, every student has a clear roadmap for their professional growth, with milestones and support mechanisms aligned to each stage of their academic journey.

Looking Ahead: Strategic Priorities

Looking ahead, Nile University plans to scale Career Centre services through AI-driven tools, including an intelligent career-matching system, a 24/7 chatbot and automated CV reviews. The Centre will also expand its workshops through a structured Networking Academy focused on professional relationship-building, LinkedIn optimisation and informational interviewing. Together, these initiatives will combine technology, human connection and strategic partnerships to strengthen career support for students.

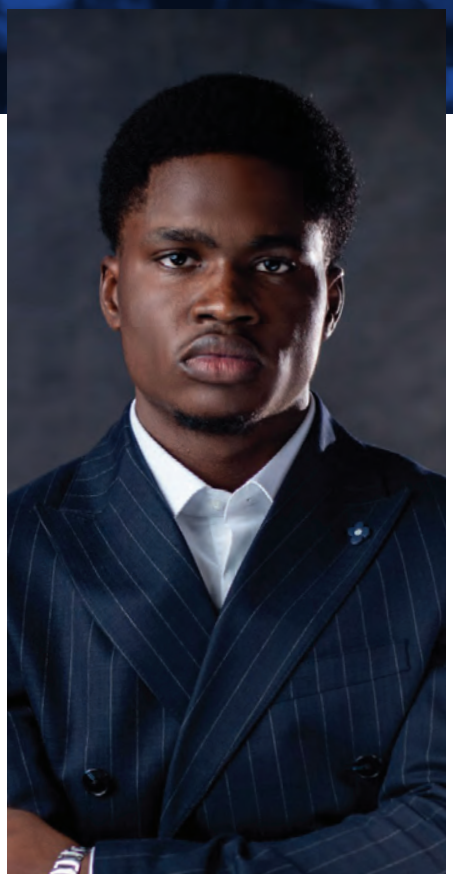

Entrepreneurship

Nile University continues to strengthen its entrepreneurship ecosystem, connecting students and alumni with opportunities to develop and grow ventures. This was demonstrated through Startup 5.0, the University's flagship pitch competition, which attracted more than 70 entries across the Ideation, Prototype and SME categories.

Following the competition, the 2025 Incubation Programme was expanded to four months and restructured into four tracks: Clarity, Builders, Launch, and Growth and SME. More than 40 founders applied, receiving one-to-one mentorship and practical, industry-led support, including guidance on business registration in Nigeria. The programme culminated in a Demo Day that brought together more than 360 students, 25 start-ups and 22 partners, including Afrilabs, Abuja Chamber of Commerce and Industry, Steady Anchor, the Small and Medium Enterprises Development Agency of Nigeria (SMEDAN), the National Information Technology Development Agency (NITDA) and the National Agency for Science and Engineering Infrastructure (NASENI).

The University's entrepreneurship ecosystem also delivered notable recognition and engagement during the year. Gyronics secured first place at the JICA SIH Demo Day in Japan, participated in VivaTech 2025 and was selected to pitch at the Presidential Villa, while Jiwe Integrated Concepts completed the Tony Elumelu Foundation programme and received recognition through the Anzisha Prize Fellowship. The University also hosted an SME Fair featuring more than 70 student and alumni businesses, awarded N3.7 million to winners of the Alumni Startup Competition, and supported more than 40 students through Idea Clinics to refine and validate their business ideas.

Alumni Spotlight

Julius Adeiza Angulu is a Nigerian Software Engineer, Entrepreneur, Product and UI/UX Designer, Investor and Amateur Boxer. He is the Founder and Chief Executive Officer of RefreeG, a technology platform that enables individuals, organisations and communities to raise funds transparently for causes including education, healthcare, entrepreneurship and disaster relief.

A graduate of Software Engineering from Nile University of Nigeria, Julius combines technical expertise with product strategy, user experience design and business leadership. His work spans software engineering, fintech, blockchain applications and digital product innovation, with a focus on developing secure, scalable and accessible solutions for emerging markets. Under his leadership, RefreeG has grown into a nationally recognised start-up and received the Federal Ministry of Education's Student Venture Capital Grant.

Julius also works as a Product and UI/UX Designer, creating digital experiences that make complex technology more accessible and intuitive. His interests extend to financial markets, where he studies equities, foreign exchange, commodities, options and cryptocurrency, alongside business strategy and capital allocation.

Beyond his professional pursuits, Julius is an undefeated amateur welterweight boxer representing Kogi State. He credits the discipline and resilience developed through boxing as an important part of his approach to entrepreneurship and professional growth.

Julius continues to build at the intersection of technology, entrepreneurship and product innovation, with ambitions to develop businesses that address challenges across Africa and create lasting value

Jawahir Kamilu Babanmallam is a First Class graduate of Biotechnology from Nile University of Nigeria and a Communications and Digital Marketing Professional with experience in executive operations, stakeholder engagement, human resources, strategic communications and content marketing. She currently works as a freelance Social Media Manager and Digital Marketer, developing digital strategies, managing online communities and creating content for businesses. She also serves as Social Media Manager and Digital Marketer for Titans Academy and its affiliated brands.

Jawahir previously worked at the Nigerian Consumer Credit Corporation (CREDICORP), where she completed her National Youth Service and was retained as a Junior Officer in the Office of the Managing Director. Her responsibilities included supporting recruitment and human resource operations, executive administration, stakeholder engagement, organisational correspondence and strategic coordination. This experience provided exposure to executive operations within a public institution.

Alongside her professional career, Jawahir is a spoken word and voice-over artist whose work has featured on platforms including UN Women programmes, TEDx events and the SDG Summit. She is also a TEDx speaker. Jawahir is also a published researcher in environmental biotechnology, having authored the undergraduate research project Bioaugmentation of Construction Sand Using Cow Dung Inhibits the Biodegradation of Xylene.

During her time at Nile University, she graduated as the Best Graduating Student in the Department of Biotechnology and Second-Best Graduating Student in the Faculty of Sciences. She also served as President of the Nile Creative Arts Club, Student Ambassador, Class Representative and Director of Poetry and Spoken Word.

Today, Jawahir is building a career across communications, digital marketing, research and creative expression, bringing together her scientific training, professional experience and creative expertise.

About The Data Collected

This analysis examines the post-graduation outcomes of Nile University of Nigeria's Graduating Class of 2024. The survey was conducted six months after their graduation. The study relies on self-reported survey responses provided by the alumni, focusing on their employment sector, salary range, and job search duration.
